MOTION SENSOR

Reducing energy consumption of buildings is no longer possible just with an integration of highly efficient LEDs. Integrated sensor solutions provide additional energy savings and dynamic control of the light, not only with presence detection, but also with measuring the daylight and adjusting the light levels of the light.

The light keeps off during daytime even when movement is detected. (Ambient lux level is above preset daylight threshold)

With movement and insufficient ambient lux level, the light is triggered on 100% by the detector.

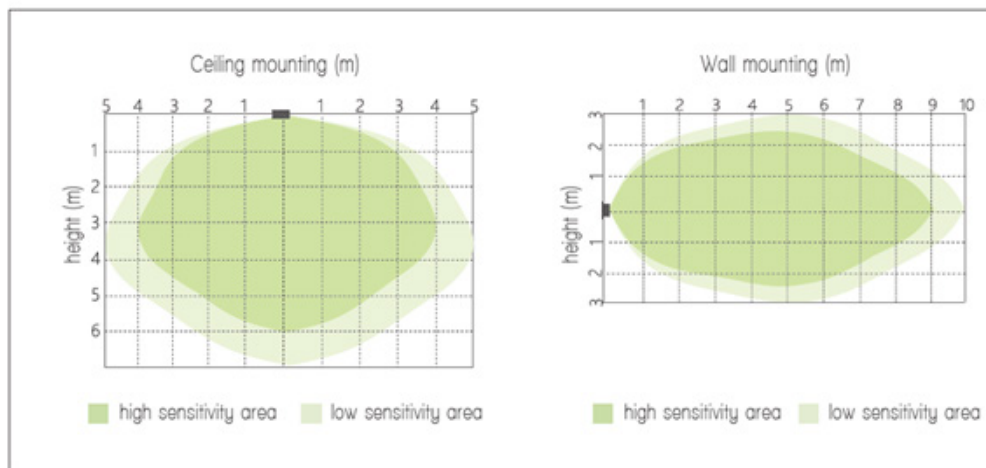

If there is no more movement, the light dims to stand-by dimming level after hold-time.

The light turns off automatically after stand-by time.

Detection area:

Possible settings:

1. Stand-by time

This is the time period that the light remains at a low level before it is completely turned off.

- I – 0s
- II – 1min
- III – 10min
- IV – +∞

	1	2	
I	●	●	0s
II	○	●	1min
III	●	○	10min
IV	○	○	+∞

2. Daylight threshold

Different daylight threshold can be preset on DIP switches. Light will always turn on upon movement if daylight sensor is disabled.

- I – Disable
- II – 50Lux
- III – 10Lux
- IV – 2Lux

I	●	●	Disable
II	○	●	50Lux
III	●	○	10Lux
IV	○	○	2Lux

3. Hold-time

Hold-time refers to the time period that the light remains 100% on if no more movement is detected.

- I – 30s
- II – 60s
- III – 180s
- IV – 10min

I	●	●	30s
II	○	●	60s
III	●	○	180s
IV	○	○	10min

4. Sensitivity

Sensitivity can be adjusted by selecting the combination on the DIP switches for different applications.

- I – 100%
- II – 75%
- III – 50%
- IV – 10%
